FREW & CAMPBELL Yos. 25 and 37 Fourteenth Stree

TUESDAY MORNING, JUNE 7. Onto has just placed a four per cent loan of \$2,800,000, maturing at intervals

in seven years, at 1032. THE forthcoming census, in the opinion of Superintendent Walker, will be infinitely the best yet given to the country,

both with respect to the extent and the accuracy of the statistics. Its compilation and publication will not be completed until Congress makes further appropriations to aid the work.

#### A Question and Answer.

Please decids a dispute by stating in your paper whether it was the English of Irish Parliament House that Gny Fawker attempted to blow up. READER. ANSWER.

The English Parliament House. The attempt happened during the reign of Comes the First, November 4th, 1604.

THE population of London is 3,814,571. In 1871 it was 3,254,000, and in 1861, 2,803,989. It has thus increased over 1,000,000 in twenty years, or at the rate of 1.8 per cent per annum. This is for what is called the "Metropolitan district" When London counts in its "belt" also, it has a population of 4,286,607.

A PAPER read by Dr. Peters, at the meeting of the New York Academy of Medicine, on Thursday evening, on the subject of "Filth Diseases," had special reference to what the learned doctor called 'subsoil filth." He said that the diseases caused by surface flith were well under stood, but that "underground leakage from sewers was a newly discovered cause of very malignant malaria infinitely worse than the old-fashioned malady.

THE phylloxers, the grape pest, is b ginning to attract the same attention in California as in France. This destructive insect has been on the Pacific coast over 2) years; but its progress has been slow, and nothing but the fact that it has ruined grapo culture in southern France would make its appearance in California a cause for alarm. So far, the phylloxera has no appeared south of San Francisco. North of that city it has worked its way from the sea-coast to the foot hills

Ir will take thirty steamers to bring from abroad to New Orleans the railway iron already sold to arrive at St. Louis. 1: doesn't take much sharp-sightedness to see in that an evidence that the down-river grain boom will go on all aummer. Railway iron is making cheap freights for New Orleans just about as successfully as the immigration boom does for New York and we shall soon see the immigrants pouring into New Orleans as well as the iron. Then look out for low freights.

at the time of his death. Like many another this correspondent took too hasty a lock at things at the Loan to be very accurate.

The card attached to the distinct stated, not that they were all Mr. Genin had, but that they were all he used at the time of his death—when he lived alone; and the card did justice to Mr. Genin by stating that he used no more dishes not from a miserly nature but from principle, because he needed no more. The writer of the card has eaten many a big apple from Mr. Genin's pockets, and knows he was not the terrible ogre he was often represented to be.

#### No More Carp for Distribution.

The United States Fish Commissioner will not have any more carp to distribute before the 1st of October. At this present moment and during the summer the whole force of the commission is on duty attending to fish-culture in various parts of the country. Mr. Hessel, the Superintendent of the Government carp ponds at Washof the Government carp ponds at Washington, states that the last carp which have been hatched are marvelous in size, some measuring when only 12 or 14 days old, 3 and 4 inches, and these without any acales, it seems quite evident that the carp have taxen a new development since they were brought from Germany, and that our waters are particularly adapted to their growth. The demand for young carp this year has been very large, and all reasonable requests for fish have been granted. It is helieved that this fall the acappy will be amply sufficient to meet all demands. The introduction of this fish in the United States is now a fixed fact. It is possible that at some future time the is possible that at some future time the introduction of the gourant will be attempted. This fish, however, can only thrive in the warmest Southern waters.

Twenty years experience has firmly rooted Tutt's Pills in public estimation. Their wonderful adaptability to the various forms of disease is a marrel to medical men of all schools. They are largely used in hospitals in Europe and America as well as in the army and navy. Cuba and other countries where yellow sever prevails, consume millions of boxes annually.
